

FabTrol^{PRO}

Shaped-plate Nesting Software Integration

Manage what parts and what material is made available to nest based on the integrated production plan

Maximize material usage by combining multiple projects on shaped-plate cutting plans

Manage part status, purchasing, stock and traceability one way, in one place, for parts of all material types

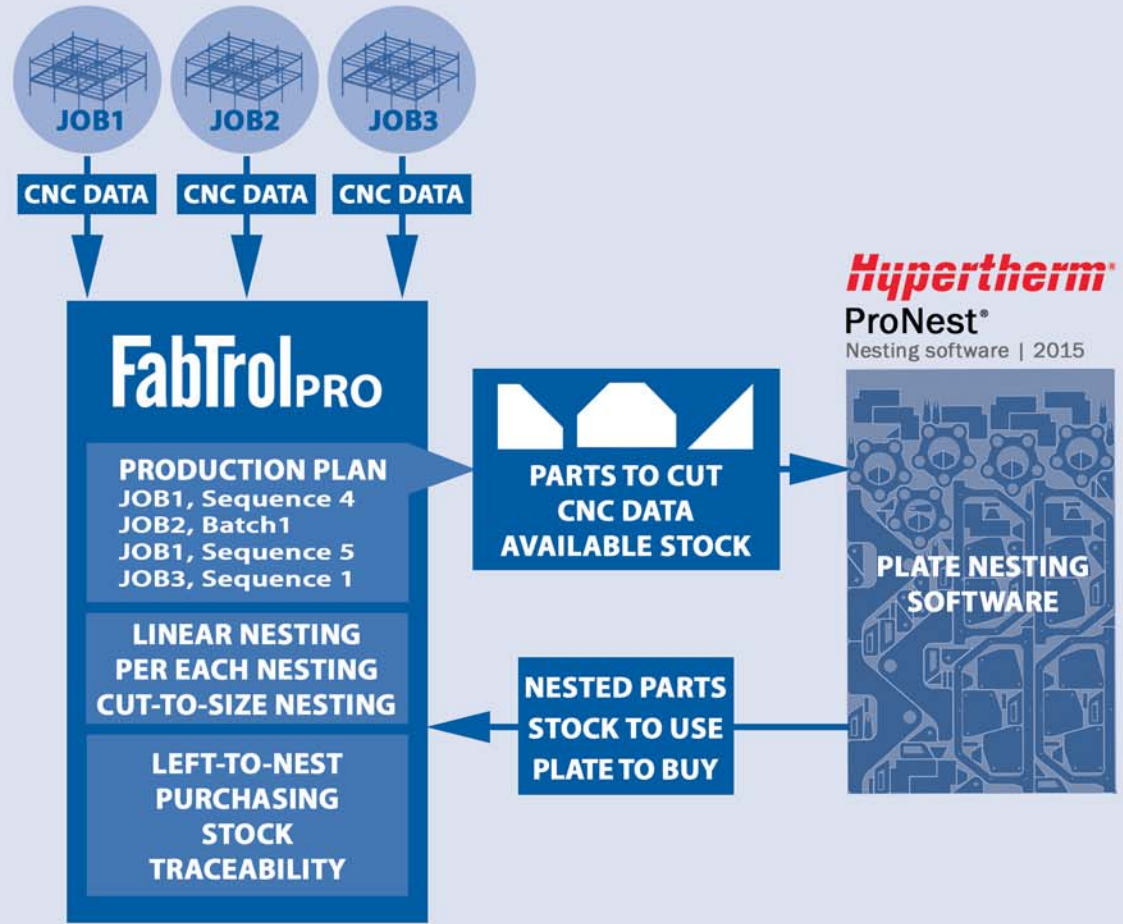

Plate Management without Integration

Do you sort through network project folders trying to find NC data for every cutting plan?

Do you spend time trying to get the part list and correct quantities in your shaped-plate nesting software to match your cutting plans?

Do you struggle to manage what parts have been nested, what parts remain to be nested and what stock was actually used?
